

Kuis Algoritma (OOP) - Kelas D
40 Questions

NAME : _____

CLASS : _____

DATE : _____

1. Which sentence is not best to describe a Method?

- | | | | |
|----------------------------|--|----------------------------|---|
| <input type="checkbox"/> A | It is defined with the name, followed by parentheses (). | <input type="checkbox"/> B | A block of code which only runs when it is called. |
| <input type="checkbox"/> C | Its name shall be a verb, or a verb phrase made up of several words. | <input type="checkbox"/> D | It is a realization of a particular item of a class |

2. What is a Class?

- | | | | |
|----------------------------|--|----------------------------|--|
| <input type="checkbox"/> A | It is a realization of a particular item of an object | <input type="checkbox"/> B | A block of code which only runs when it is called. |
| <input type="checkbox"/> C | A blueprint that defines and describes the static attributes and dynamic behaviors common to all objects of the same kind. | <input type="checkbox"/> D | A data field that has unique attributes and behavior |

3. The mechanism of hiding of data implementation by restricting access to public methods, is the definition of?

- | | | | |
|----------------------------|-----------------------------|----------------------------|--------------|
| <input type="checkbox"/> A | Encapsulation | <input type="checkbox"/> B | Abstraction |
| <input type="checkbox"/> C | Object Oriented Programming | <input type="checkbox"/> D | Polymorphism |

4. The best way to naming a class based on the Class Naming Convention are... (3 answers)

- | | | | |
|----------------------------|--|----------------------------|--|
| <input type="checkbox"/> A | It shall be a noun or a noun phrase made up of several words | <input type="checkbox"/> B | All the words shall be initial-capitalized (camel-case). |
| <input type="checkbox"/> C | They are denoted with a pair of parentheses | <input type="checkbox"/> D | Choose a meaningful and self-descriptive classname. |

5. What is a Constructor?

- | | | | |
|----------------------------|--|----------------------------|--|
| <input type="checkbox"/> A | It only reveal internal mechanisms that are relevant for the use of other objects, hiding any unnecessary implementation code. | <input type="checkbox"/> B | A block of code that initializes the newly created object. |
| <input type="checkbox"/> C | It resembles an instance class in java but it's not a method as it doesn't have a return type. | | |

6. A concept of having more than one constructor with different parameters list, in such a way so that each constructor performs a different task.

(a) _____

- | | |
|--|---|
| <input type="checkbox"/> A Default Constructor | <input type="checkbox"/> B Constructor Overriding |
| <input type="checkbox"/> C Constructor Overloading | <input type="checkbox"/> D Constructor Listing |

7. What is the differences of public and private access modifiers?

- | | |
|--|---|
| <input type="checkbox"/> A The private variable could not be accessed anywhere | <input type="checkbox"/> B A private variable is accessible and available to all the other objects in the system. |
| <input type="checkbox"/> C The public method is accessible and available within this class only. | <input type="checkbox"/> D A public method is accessible and available to all the other objects in the system. |

8. Which is the correct syntax to instantiate a class?

- | | |
|--|--|
| <input type="checkbox"/> A
<pre>Circle c1;
c2 = new Circle(2.5);
System.out.println(c2.toString());</pre> | <input type="checkbox"/> B
<pre>Circle c3, c3 = new Circle(2.5);
System.out.println(c3.toString());</pre> |
| <input type="checkbox"/> C
<pre>c1 = new Circle();
System.out.println(c1.toString());</pre> | |

9. Which one is a constructor?

- | | |
|--|--|
| <input type="checkbox"/> A
<pre>public double getRadius() {
 return radius;
}</pre> | <input type="checkbox"/> B
<pre>public Circle (double rad) {
 radius = rad;
 color = "red";
}</pre> |
| <input type="checkbox"/> C
<pre>Circle c1;
c2 = new Circle(2.5);
System.out.println(c2.toString());</pre> | |

10. What are the ways of reusing existing classes in java? (2 choices)

- | | |
|--|--|
| <input type="checkbox"/> A Overriding | <input type="checkbox"/> B Overloading |
| <input type="checkbox"/> C Inheritance | <input type="checkbox"/> D Composition |

11. What is the best way to describe Composition?

- | | |
|--|--|
| <input type="checkbox"/> A A class has a field that is an object. | <input type="checkbox"/> B The derived classes can reuse the code of existing super classes. |
| <input type="checkbox"/> C A new class extends the definition of an existing class by adding fields and methods. | <input type="checkbox"/> D All answers are wrong. |

12. What syntax used for inheritance?

- | | |
|-------------------------------------|------------------------------------|
| <input type="checkbox"/> A abstract | <input type="checkbox"/> B public |
| <input type="checkbox"/> C private | <input type="checkbox"/> D extends |

13. What is Inheritance?

- | | |
|--|---|
| <input type="checkbox"/> A It is a feature that allows a class to have more than one method having the same name, if their argument lists are different. | <input type="checkbox"/> B It is the mechanism whereby the implementation details of a class are kept hidden from the user. |
| <input type="checkbox"/> C It defines the behavior of the objects that are created from the class. | <input type="checkbox"/> D It is the mechanism of basing an object or class upon another object or class, retaining similar implementation. |

14.

Look at the picture, which one is the Class Inheritance?

- | | |
|---|--|
| <input type="checkbox"/> A Class Person to Class Address and Class Date | <input type="checkbox"/> B Class Actor to Class Person |
| <input type="checkbox"/> C OutStream() in each class | <input type="checkbox"/> D Class Address to Class Person |

15. What are the best sentences to describe Polymorphism? (2 answers)

- | | |
|---|---|
| <input type="checkbox"/> A It is the ability of an object to take on many forms. | <input type="checkbox"/> B It is a process of hiding the implementation details from the user, only the functionality will be provided to the user. |
| <input type="checkbox"/> C It is the ability to define a behavior that's specific to the subclass type. | <input type="checkbox"/> D When a parent class reference is used to refer to a child class object. |

16.

```
public class Animal{}
public class Deer extends Animal
```

Which statements are correct to describe class Deer? (3 answers)

- | | |
|--|---|
| <input type="checkbox"/> A A Deer is an Object | <input type="checkbox"/> B A Deer is an Animal |
| <input type="checkbox"/> C Class Deer is the super-class of Animal | <input type="checkbox"/> D Class Deer inherits all behavior from Animal |

17.

```
class Animal {
    public void animalSound() {
        System.out.println("The animal makes a sound");
    }
}

class Pig extends Animal {
    public void animalSound() {
        System.out.println("The pig says: wee wee");
    }
}

class Dog extends Animal {
    public void animalSound() {
        System.out.println("The dog says: bow wow");
    }
}
```

The correct syntax to instantiate all the objects are... (3 answers)

- | | | | |
|----------------------------|---------------------------|----------------------------|----------------------------|
| <input type="checkbox"/> A | Pig myPig = new Animal(); | <input type="checkbox"/> B | Animal myFish = new Dog(); |
| <input type="checkbox"/> C | Pig myPig = new Pig(); | <input type="checkbox"/> D | Animal myDog = new Dog(); |
| <input type="checkbox"/> E | Dog theDog = new Pig(); | | |

18. kemampuan untuk menggunakan kembali kelas yang sudah ada disebut

- | | | | |
|----------------------------|-------------|----------------------------|--------------|
| <input type="checkbox"/> A | Enkapsulasi | <input type="checkbox"/> B | Inheritance |
| <input type="checkbox"/> C | Modularity | <input type="checkbox"/> D | Reuseability |

19. Salah satu sifat Java yang memiliki arti "*banyak bentuk*" disebut?

- | | | | |
|----------------------------|-------------|----------------------------|--------------|
| <input type="checkbox"/> A | Data Hiding | <input type="checkbox"/> B | Polymorphism |
| <input type="checkbox"/> C | Inheritance | <input type="checkbox"/> D | Modifier |

20. public, protected,private, dan friendly termasuk dalam modifier jenis apa?

- | | | | |
|----------------------------|-----------------|----------------------------|-----------------|
| <input type="checkbox"/> A | Native modifier | <input type="checkbox"/> B | Static modifier |
| <input type="checkbox"/> C | Final modifier | <input type="checkbox"/> D | Access modifier |

21. "*public int getTinggi(){}*" adalah contoh pendeklarasian modifier di?

- | | | | |
|----------------------------|--------|----------------------------|-----------|
| <input type="checkbox"/> A | Method | <input type="checkbox"/> B | Objek |
| <input type="checkbox"/> C | Class | <input type="checkbox"/> D | Attribute |

22. instansiasi atau hasil ciptaan dari suatu class disebut

- | | | | |
|----------------------------|-----------|----------------------------|-------|
| <input type="checkbox"/> A | Attribute | <input type="checkbox"/> B | Objek |
| <input type="checkbox"/> C | Modifer | <input type="checkbox"/> D | Class |

23. Kemudahan dalam pengembangan program aplikasi berorientasi objek adalah ...

- | | |
|---|--|
| <input type="checkbox"/> A mengikuti model yang ada dalam kehidupan nyata | <input type="checkbox"/> B biaya perawatan (maintenance) murah |
| <input type="checkbox"/> C mengikuti perkembangan zaman | <input type="checkbox"/> D kemudahan membuat kode program |

24. Dalam konsep pemrograman berorientasi objek terdapat istilah Enkapsulasi, maksudnya ...

- | | |
|---|--|
| <input type="checkbox"/> A digunakannya suatu interface yang sama untuk memerintah suatu objek agar melakukan suatu aksi atau tindakan yang mungkin hasil akhir yang serupa, tetapi melalui proses yang berbeda | <input type="checkbox"/> B suatu mekanisme untuk menyembunyikan atau memproteksi suatu proses dari kemungkinan interpretasi atau penyalahgunaan dari luar sistem |
| <input type="checkbox"/> C Benar Semua | <input type="checkbox"/> D suatu proses dimana suatu class diturunkan dari class lainnya sehingga ia mendapatkan ciri atau sifat dari class tersebut |

25. Dalam konsep pemrograman berorientasi objek terdapat istilah Polymorphism, maksudnya ...

- | | |
|---|--|
| <input type="checkbox"/> A Benar Semua | <input type="checkbox"/> B suatu proses dimana suatu class diturunkan dari class lainnya sehingga ia mendapatkan ciri atau sifat dari class tersebut |
| <input type="checkbox"/> C digunakannya suatu interface yang sama untuk memerintah suatu objek agar melakukan suatu aksi atau tindakan yang mungkin hasil akhir yang serupa, tetapi melalui proses yang berbeda | <input type="checkbox"/> D suatu mekanisme untuk menyembunyikan atau memproteksi suatu proses dari kemungkinan interpretasi atau penyalahgunaan dari luar sistem |

26. Perangkat Lunak yang digunakan untuk membuat aplikasi berbasis objek adalah ...

- | | |
|-------------------------------------|---------------------------------------|
| <input type="checkbox"/> A NetBeans | <input type="checkbox"/> B Dev C++ |
| <input type="checkbox"/> C Star UML | <input type="checkbox"/> D Ms. Access |

27. **Attributes of an object are also known as.....**

- | | |
|--------------------------------------|---------------------------------------|
| <input type="checkbox"/> A methods | <input type="checkbox"/> B classes |
| <input type="checkbox"/> C functions | <input type="checkbox"/> D properties |

28. Which from the following is a feature that allows us to perform a single action in different ways.

- | | |
|--|--|
| <input type="checkbox"/> A Inheritance | <input type="checkbox"/> B Polymorphism |
| <input type="checkbox"/> C Abstraction | <input type="checkbox"/> D Encapsulation |

29. How many objects can be made from a class?

- | | | | |
|----------------------------|-------------------------------------|----------------------------|---------------------|
| <input type="checkbox"/> A | None, you make classes from objects | <input type="checkbox"/> B | All of the above |
| <input type="checkbox"/> C | one | <input type="checkbox"/> D | As many as you want |

30. What is the difference between a class and an object?

- | | | | |
|----------------------------|---|----------------------------|--|
| <input type="checkbox"/> A | A class is a blueprint to make an object | <input type="checkbox"/> B | An object is a blueprint to make a class |
| <input type="checkbox"/> C | Blueprint class is an object make a class | <input type="checkbox"/> D | A blueprint is an object to make a class |

31. The wrapping up of data and functions into a single unit is called

- | | | | |
|----------------------------|---------------|----------------------------|-------------|
| <input type="checkbox"/> A | object | <input type="checkbox"/> B | class |
| <input type="checkbox"/> C | encapsulation | <input type="checkbox"/> D | overloading |

32. What is the output of the code below?

```
public class ExampleVoid {  
  
    public static void main(String[] args) {  
        methodRankPoints(255.7);  
    }  
  
    public static void methodRankPoints(double points) {  
        if (points >= 202.5) {  
            System.out.println("Rank:A1");  
        }else if (points >= 122.4) {  
            System.out.println("Rank:A2");  
        }else {  
            System.out.println("Rank:A3");  
        }  
    }  
}
```

- | | | | |
|----------------------------|-----------|----------------------------|---------|
| <input type="checkbox"/> A | Rank:A3 | <input type="checkbox"/> B | Rank:A1 |
| <input type="checkbox"/> C | No output | <input type="checkbox"/> D | Rank:A2 |

33.

```
class kucing:
    def __init__(self, nama, perilaku):
        self.nama = nama
        self.perilaku = perilaku

    def perkenalan (self):
        print(f'Perkenalkan nama kucingku {self.nama}, dia kucing yang {self.perilaku}')

meow = kucing('Meo', 'suka berlari-lari')
kitty = kucing(perilaku = 'suka tidur', nama = 'Kitty')
meow.perkenalan()
kitty.perkenalan()
print()
```

Pilih salah satu yang termasuk Atribut!

- | | | | |
|----------------------------|----------------|----------------------------|------------|
| <input type="checkbox"/> A | Nama, Perilaku | <input type="checkbox"/> B | Self |
| <input type="checkbox"/> C | Meow, Kitty | <input type="checkbox"/> D | Perkenalan |

34. Kelas turunan yang ada pada *Inheritance* dapat memiliki konstruktor tetapi memiliki perilaku yang sedikit berbeda dengan konstruktor yang terdapat pada kelas induk, apa perilaku yang berbeda tersebut?

- | | | | |
|----------------------------|---|----------------------------|--|
| <input type="checkbox"/> A | Apabila kelas turunan memiliki konstruktor sendiri, maka ia akan menjalankan konstruktor dari kelas induk sehingga konstruktor pada kelas turunan tidak akan pernah dieksekusi. | <input type="checkbox"/> B | Apabila kelas turunan memiliki konstruktor sendiri, maka ia akan mengeksekusi konstruktor miliknya sendiri dan kelas induk. |
| <input type="checkbox"/> C | Apabila kelas turunan memiliki konstruktor sendiri, maka ia akan mengeksekusi konstruktor dari kelas induk terlebih dahulu, baru menjalankan konstruktor dari kelas turunan. | <input type="checkbox"/> D | Apabila kelas turunan memiliki konstruktor sendiri, maka ia akan menimpa konstruktor dari kelas induk sehingga konstruktor kelas induk tidak akan pernah dieksekusi. |

35. Perhatikan kode di bawah ini:

```
class Parent {
    final void show() {}
}
class Child extends Parent {
    void show() {}
}
```

Jika kode di atas dijalankan, apa yang terjadi?

- | | | | |
|----------------------------|----------------------------|----------------------------|----------------------------|
| <input type="checkbox"/> A | Terjadi polimorfisme | <input type="checkbox"/> B | Terjadi error |
| <input type="checkbox"/> C | Terjadi proses inheritance | <input type="checkbox"/> D | Terjadi proses enkapsulasi |

36. Perhatikan kode berikut.

```
class Bicycle
{
    public int gear;
    public int speed;
    public Bicycle(int gear, int speed)
    {
        this.gear = gear;
        this.speed = speed;
    }

    public void applyBrake(int decrement)
    {
        speed -= decrement;
    }
    public void speedUp(int increment)
    {
        speed += increment;
    }
    public String toString()
    {
        return("No of gears are "+gear
        +"\n"
        + "speed of bicycle is "+speed);
    }
}

// derived class
class MountainBike extends Bicycle
{

    public int seatHeight;

    public MountainBike(int gear,int speed,
    int startHeight)
    {

        super(gear, speed);
        seatHeight = startHeight;
    }
    public void setHeight(int newValue)
    {
        seatHeight = newValue;
    }

    @Override
```

```
public String toString()
{
return (super.toString()+
"\nseat height is "+seatHeight);
}
}
```

// driver class

```
public class Test
{
public static void main(String args[])
{
MountainBike mb = new MountainBike(3, 100, 25);
System.out.println(mb.toString());
}
}
```

Ketika dijalankan, nilai yang ditampilkan untuk no of gears adalah

A

25

B

3

C

100

D

Salah semua

37. Perhatikan kode berikut.

```
class Bicycle
{
    public int gear;
    public int speed;
    public Bicycle(int gear, int speed)
    {
        this.gear = gear;
        this.speed = speed;
    }

    public void applyBrake(int decrement)
    {
        speed -= decrement;
    }
    public void speedUp(int increment)
    {
        speed += increment;
    }
    public String toString()
    {
        return("No of gears are "+gear
        +"\n"
        + "speed of bicycle is "+speed);
    }
}

// derived class
class MountainBike extends Bicycle
{

    public int seatHeight;

    public MountainBike(int gear,int speed,
    int startHeight)
    {

        super(gear, speed);
        seatHeight = startHeight;
    }
    public void setHeight(int newValue)
    {
        seatHeight = newValue;
    }

    @Override
```

```

public String toString()
{
return (super.toString()+
"\nseat height is "+seatHeight);
}
}

```

```

// driver class
public class Test
{
public static void main(String args[])
{
MountainBike mb = new MountainBike(3, 100, 25);
System.out.println(mb.toString());
}
}

```

Ketika dijalankan, nilai yang ditampilkan untuk "speed of bicycle" adalah

- | | | | |
|----------------------------|-----|----------------------------|-----|
| <input type="checkbox"/> A | 100 | <input type="checkbox"/> B | 25 |
| <input type="checkbox"/> C | 3 | <input type="checkbox"/> D | 125 |

38. Jika sebuah kelas diberi keyword final maka ...

- | | | | |
|----------------------------|--|----------------------------|-----------------------------------|
| <input type="checkbox"/> A | Kelas itu tidak dapat diturunkan (diwariskan) | <input type="checkbox"/> B | Kelas itu tidak dapat di-override |
| <input type="checkbox"/> C | Semua salah karena kelas tidak bisa diberi keyword final | <input type="checkbox"/> D | Kelas dapat dienkapsulasi |

39. Menyembunyikan implementasi internal dikenal dengan nama...

- | | | | |
|----------------------------|-------------|----------------------------|------------|
| <input type="checkbox"/> A | pewarisan | <input type="checkbox"/> B | overriding |
| <input type="checkbox"/> C | enkapsulasi | <input type="checkbox"/> D | abstraksi |

40. Class yang diwariskan dapat menggunakan atau mengakses atribut dan method yang ada pada class parent selayaknya class parent itu sendiri.

- | | | | |
|----------------------------|-------|----------------------------|------|
| <input type="checkbox"/> A | False | <input type="checkbox"/> B | True |
|----------------------------|-------|----------------------------|------|
