

Kuis Algorithms (OOP) - Kelas A  
40 Questions

NAME : \_\_\_\_\_

CLASS : \_\_\_\_\_

DATE : \_\_\_\_\_

1. Which sentence is not best to describe a Method?

- |                            |  |                            |  |
|----------------------------|--|----------------------------|--|
| <input type="checkbox"/> A | A block of code which only runs when it is called.                   | <input type="checkbox"/> B | It is defined with the name, followed by parentheses (). |
| <input type="checkbox"/> C | Its name shall be a verb, or a verb phrase made up of several words. | <input type="checkbox"/> D | It is a realization of a particular item of a class      |

2. What is a Class?

- |                            |  |                            |   |
|----------------------------|--|----------------------------|---|
| <input type="checkbox"/> A | A blueprint that defines and describes the static attributes and dynamic behaviors common to all objects of the same kind. | <input type="checkbox"/> B | It is a realization of a particular item of an object |
| <input type="checkbox"/> C | A block of code which only runs when it is called.   | <input type="checkbox"/> D | A data field that has unique attributes and behavior  |

3. The mechanism of hiding of data implementation by restricting access to public methods, is the definition of?

- |                            |                             |                            |               |
|----------------------------|-----------------------------|----------------------------|---------------|
| <input type="checkbox"/> A | Abstraction                 | <input type="checkbox"/> B | Encapsulation |
| <input type="checkbox"/> C | Object Oriented Programming | <input type="checkbox"/> D | Polymorphism  |

4. The best way to naming a class based on the Class Naming Convention are... (3 answers)

- |                            |  |                            |   |
|----------------------------|--|----------------------------|---|
| <input type="checkbox"/> A | It shall be a noun or a noun phrase made up of several words | <input type="checkbox"/> B | Choose a meaningful and self-descriptive classname. |
| <input type="checkbox"/> C | All the words shall be initial-capitalized (camel-case).     | <input type="checkbox"/> D | They are denoted with a pair of parentheses         |

5. What is a Constructor?

A

A block of code that initializes the newly created object.

B

It resembles an instance class in java but it's not a method as it doesn't have a return type.

C

It only reveal internal mechanisms that are relevant for the use of other objects, hiding any unnecessary implementation code.

6. A concept of having more than one constructor with different parameters list, in such a way so that each constructor performs a different task.

(a) \_\_\_\_\_

A

Constructor Overloading

B

Constructor Overriding

C

Constructor Listing

D

Default Constructor

7. What is the differences of public and private access modifiers?

A

The public method is accessible and available within this class only.

B

A private variable is accessible and available to all the other objects in the system.

C

A public method is accessible and available to all the other objects in the system.

D

The private variable could not be accessed anywhere

8. Which is the correct syntax to instantiate a class?

A

```
c1 = new Circle();  
System.out.println(c1.toString());
```

B

```
Circle c1;  
c2 = new Circle(2.5);  
System.out.println(c2.toString());
```

C

```
Circle c3, c3 = new Circle(2.5);  
System.out.println(c3.toString());
```

9. Which one is a constructor?

A

```
Circle c1;  
c2 = new Circle(2.5);  
System.out.println(c2.toString());
```

B

```
public Circle (double rad) {  
    radius = rad;  
    color = "red";  
}
```

C

```
public double getRadius() {  
    return radius;  
}
```

10. What are the ways of reusing existing classes in java? (2 choices)

A

Composition

B

Inheritance

C

Overloading

D

Overriding

11. What is the best way to describe Composition?

- ☐ A A new class extends the definition of an existing class by adding fields and methods.
- ☐ B The derived classes can reuse the code of existing super classes.
- ☐ C All answers are wrong.
- ☐ D A class has a field that is an object.

12. What syntax used for inheritance?

- ☐ A extends
- ☐ B public
- ☐ C private
- ☐ D abstract

13. What is Inheritance?

- ☐ A It is the mechanism whereby the implementation details of a class are kept hidden from the user.
- ☐ B It is the mechanism of basing an object or class upon another object or class, retaining similar implementation.
- ☐ C It is a feature that allows a class to have more than one method having the same name, if their argument lists are different.
- ☐ D It defines the behavior of the objects that are created from the class.

14.

Look at the picture, which one is the Class Inheritance?

- ☐ A Class Actor to Class Person
- ☐ B Class Address to Class Person
- ☐ C OutStream() in each class
- ☐ D Class Person to Class Address and Class Date

15. What are the best sentences to describe Polymorphism? (2 answers)

- ☐ A It is the ability of an object to take on many forms.
- ☐ B It is the ability to define a behavior that's specific to the subclass type.
- ☐ C When a parent class reference is used to refer to a child class object.
- ☐ D It is a process of hiding the implementation details from the user, only the functionality will be provided to the user.

16. 

```
public class Animal{}  
public class Deer extends Animal
```

Which statements are correct to describe class Deer? (3 answers)

- |  |   |
|--|---|
| <input type="checkbox"/> A A Deer is an Animal                     | <input type="checkbox"/> B A Deer is an Object                          |
| <input type="checkbox"/> C Class Deer is the super-class of Animal | <input type="checkbox"/> D Class Deer inherits all behavior from Animal |

17. 

```
class Animal {  
    public void animalSound() {  
        System.out.println("The animal makes a sound");  
    }  
}  
  
class Pig extends Animal {  
    public void animalSound() {  
        System.out.println("The pig says: wee wee");  
    }  
}  
  
class Dog extends Animal {  
    public void animalSound() {  
        System.out.println("The dog says: bow wow");  
    }  
}
```

The correct syntax to instantiate all the objects are... (3 answers)

- |  |   |
|--|---|
| <input type="checkbox"/> A Animal myDog = new Dog(); | <input type="checkbox"/> B Pig myPig = new Pig();     |
| <input type="checkbox"/> C Pig myPig = new Animal(); | <input type="checkbox"/> D Animal myFish = new Dog(); |
| <input type="checkbox"/> E Dog theDog = new Pig();   |   |

18. kemampuan untuk menggunakan kembali kelas yang sudah ada disebut

- |   |  |
|---|--|
| <input type="checkbox"/> A Enkapsulasi  | <input type="checkbox"/> B Modularity  |
| <input type="checkbox"/> C Reuseability | <input type="checkbox"/> D Inheritance |

19. Salah satu sifat Java yang memiliki arti "*banyak bentuk*" disebut?

- |   |  |
|---|--|
| <input type="checkbox"/> A Polymorphism | <input type="checkbox"/> B Inheritance |
| <input type="checkbox"/> C Data Hiding  | <input type="checkbox"/> D Modifier    |

20. public, protected,private, dan friendly termasuk dalam modifier jenis apa?

- |  |  |
|--|--|
| <input type="checkbox"/> A Final modifier  | <input type="checkbox"/> B Access modifier |
| <input type="checkbox"/> C Static modifier | <input type="checkbox"/> D Native modifier |

21. "`public int getTinggi(){}f`" adalah contoh pendeklarasian modifier di?

- |                                   |                                      |
|-----------------------------------|--------------------------------------|
| <input type="checkbox"/> A Class  | <input type="checkbox"/> B Attribute |
| <input type="checkbox"/> C Method | <input type="checkbox"/> D Objek     |

22. instansiasi atau hasil ciptaan dari suatu class disebut

- |                                      |                                  |
|--------------------------------------|----------------------------------|
| <input type="checkbox"/> A Modifer   | <input type="checkbox"/> B Objek |
| <input type="checkbox"/> C Attribute | <input type="checkbox"/> D Class |

23. Kemudahan dalam pengembangan program aplikasi berorientasi objek adalah ...

- |   |  |
|---|--|
| <input type="checkbox"/> A mengikuti model yang ada dalam kehidupan nyata | <input type="checkbox"/> B mengikuti perkembangan zaman        |
| <input type="checkbox"/> C kemudahan membuat kode program                 | <input type="checkbox"/> D biaya perawatan (maintenance) murah |

24. Dalam konsep pemrograman berorientasi objek terdapat istilah Enkapsulasi, maksudnya ...

- |   |  |
|---|--|
| <input type="checkbox"/> A suatu mekanisme untuk menyembunyikan atau memproteksi suatu proses dari kemungkinan interprensi atau penyalahgunaandari luar sistem  | <input type="checkbox"/> B suatu proses dimana suatu class diturunkan dari class lainnya sehingga ia mendapatkan ciri atau sifat dari class tersebut |
| <input type="checkbox"/> C digunakannya suatu interface yang sama untuk memerintah suatu objek agar melakukan suatu aksi atau tindakan yang mungkin hasil akhir yang serupa, tetapi melalui proses yang berbeda | <input type="checkbox"/> D Benar Semua   |

25. Dalam konsep pemrograman berorientasi objek terdapat istilah Polymorphism, maksudnya ...

- |   |  |
|---|--|
| <input type="checkbox"/> A suatu mekanisme untuk menyembunyikan atau memproteksi suatu proses dari kemungkinan interprensi atau penyalahgunaandari luar sistem  | <input type="checkbox"/> B suatu proses dimana suatu class diturunkan dari class lainnya sehingga ia mendapatkan ciri atau sifat dari class tersebut |
| <input type="checkbox"/> C digunakannya suatu interface yang sama untuk memerintah suatu objek agar melakukan suatu aksi atau tindakan yang mungkin hasil akhir yang serupa, tetapi melalui proses yang berbeda | <input type="checkbox"/> D Benar Semua   |

26. Perangkat Lunak yang digunakan untuk membuat aplikasi berbasis objek adalah ...

- |                                       |                                     |
|---------------------------------------|-------------------------------------|
| <input type="checkbox"/> A Star UML   | <input type="checkbox"/> B Dev C++  |
| <input type="checkbox"/> C Ms. Access | <input type="checkbox"/> D NetBeans |

27. **Attributes of an object are also known as.....**

- |                            |            |                            |           |
|----------------------------|------------|----------------------------|-----------|
| <input type="checkbox"/> A | properties | <input type="checkbox"/> B | functions |
| <input type="checkbox"/> C | classes    | <input type="checkbox"/> D | methods   |

28. Which from the following is a feature that allows us to perform a single action in different ways.

- |                            |              |                            |               |
|----------------------------|--------------|----------------------------|---------------|
| <input type="checkbox"/> A | Inheritance  | <input type="checkbox"/> B | Abstraction   |
| <input type="checkbox"/> C | Polymorphism | <input type="checkbox"/> D | Encapsulation |

29. How many objects can be made from a class?

- |                            |                                     |                            |                     |
|----------------------------|-------------------------------------|----------------------------|---------------------|
| <input type="checkbox"/> A | None, you make classes from objects | <input type="checkbox"/> B | As many as you want |
| <input type="checkbox"/> C | one                                 | <input type="checkbox"/> D | All of the above    |

30. What is the difference between a class and an object?

- |                            |  |                            |   |
|----------------------------|--|----------------------------|---|
| <input type="checkbox"/> A | A class is a blueprint to make an object | <input type="checkbox"/> B | A blueprint is an object to make a class  |
| <input type="checkbox"/> C | An object is a blueprint to make a class | <input type="checkbox"/> D | Blueprint class is an object make a class |

31. The wrapping up of data and functions into a single unit is called

- |                            |             |                            |               |
|----------------------------|-------------|----------------------------|---------------|
| <input type="checkbox"/> A | overloading | <input type="checkbox"/> B | object        |
| <input type="checkbox"/> C | class       | <input type="checkbox"/> D | encapsulation |

32. What is the output of the code below?

```
public class ExampleVoid {  
  
    public static void main(String[] args) {  
        methodRankPoints(255.7);  
    }  
  
    public static void methodRankPoints(double points) {  
        if (points >= 202.5) {  
            System.out.println("Rank:A1");  
        }else if (points >= 122.4) {  
            System.out.println("Rank:A2");  
        }else {  
            System.out.println("Rank:A3");  
        }  
    }  
}
```

- |                                    |                                      |
|------------------------------------|--------------------------------------|
| <input type="checkbox"/> A Rank:A1 | <input type="checkbox"/> B Rank:A3   |
| <input type="checkbox"/> C Rank:A2 | <input type="checkbox"/> D No output |

33.

```
class kucing:  
    def __init__(self, nama, perilaku):  
        self.nama = nama  
        self.perilaku = perilaku  
  
    def perkenalan (self):  
        print(f'Perkenalkan nama kucingku {self.nama}, dia kucing yang {self.perilaku}')  
  
meowy = kucing('Meo', 'suka berlari'+'\n')  
kitty = kucing(perilaku = 'suka tidur', nama = 'Kitty')  
meowy.perkenalan()  
kitty.perkenalan()  
print()
```

Pilih salah satu yang termasuk Atribut!

- |   |   |
|---|---|
| <input type="checkbox"/> A Nama, Perilaku | <input type="checkbox"/> B Meowy, Kitty |
| <input type="checkbox"/> C Perkenalan     | <input type="checkbox"/> D Self         |

34. Kelas turunan yang ada pada *Inheritance* dapat memiliki konstruktor tetapi memiliki perilaku yang sedikit berbeda dengan konstruktor yang terdapat pada kelas induk, apa perilaku yang berbeda tersebut?

- |  |   |
|--|---|
| <input type="checkbox"/> A Apabila kelas turunan memiliki konstruktor sendiri, maka ia akan mengeksekusi konstruktor miliknya sendiri dan kelas induk.   | <input type="checkbox"/> B Apabila kelas turunan memiliki konstruktor sendiri, maka ia akan menimpa konstruktor dari kelas induk sehingga konstruktor kelas induk tidak akan pernah dieksekusi.         |
| <input type="checkbox"/> C Apabila kelas turunan memiliki konstruktor sendiri, maka ia akan menjalankan konstruktor dari kelas induk sehingga konstruktor pada kelas turunan tidak akan pernah dieksekusi. | <input type="checkbox"/> D Apabila kelas turunan memiliki konstruktor sendiri, maka ia akan mengeksekusi konstruktor dari kelas induk terlebih dahulu, baru menjalankan konstruktor dari kelas turunan. |

35. Perhatikan kode di bawah ini:

```
class Parent {  
  final void show() {}  
}  
class Child extends Parent {  
  void show() {}  
}
```

Jika kode di atas dijalankan, apa yang terjadi?

- |                            |                            |                            |                            |
|----------------------------|----------------------------|----------------------------|----------------------------|
| <input type="checkbox"/> A | Terjadi proses inheritance | <input type="checkbox"/> B | Terjadi proses enkapsulasi |
| <input type="checkbox"/> C | Terjadi error              | <input type="checkbox"/> D | Terjadi polimorfisme       |

36. Perhatikan kode berikut.

```
class Bicycle
{
    public int gear;
    public int speed;
    public Bicycle(int gear, int speed)
    {
        this.gear = gear;
        this.speed = speed;
    }

    public void applyBrake(int decrement)
    {
        speed -= decrement;
    }
    public void speedUp(int increment)
    {
        speed += increment;
    }
    public String toString()
    {
        return("No of gears are "+gear
        +"\n"
        + "speed of bicycle is "+speed);
    }
}

// derived class
class MountainBike extends Bicycle
{

    public int seatHeight;

    public MountainBike(int gear,int speed,
    int startHeight)
    {

        super(gear, speed);
        seatHeight = startHeight;
    }
    public void setHeight(int newValue)
    {
        seatHeight = newValue;
    }

    @Override
```

```
public String toString()
{
return (super.toString()+
"\nseat height is "+seatHeight);
}
}
```

// driver class

```
public class Test
{
public static void main(String args[])
{
MountainBike mb = new MountainBike(3, 100, 25);
System.out.println(mb.toString());
}
}
```

Ketika dijalankan, nilai yang ditampilkan untuk no of gears adalah

A

3

B

100

C

25

D

Salah semua

37. Perhatikan kode berikut.

```
class Bicycle
{
    public int gear;
    public int speed;
    public Bicycle(int gear, int speed)
    {
        this.gear = gear;
        this.speed = speed;
    }

    public void applyBrake(int decrement)
    {
        speed -= decrement;
    }
    public void speedUp(int increment)
    {
        speed += increment;
    }
    public String toString()
    {
        return("No of gears are "+gear
        +"\n"
        + "speed of bicycle is "+speed);
    }
}

// derived class
class MountainBike extends Bicycle
{

    public int seatHeight;

    public MountainBike(int gear,int speed,
    int startHeight)
    {

        super(gear, speed);
        seatHeight = startHeight;
    }
    public void setHeight(int newValue)
    {
        seatHeight = newValue;
    }

    @Override
```

```
public String toString()
{
return (super.toString()+
"\nseat height is "+seatHeight);
}
}
```

```
// driver class
public class Test
{
public static void main(String args[])
{
MountainBike mb = new MountainBike(3, 100, 25);
System.out.println(mb.toString());
}
}
```

Ketika dijalankan, nilai yang ditampilkan untuk "speed of bicycle" adalah

- |                            |     |                            |     |
|----------------------------|-----|----------------------------|-----|
| <input type="checkbox"/> A | 25  | <input type="checkbox"/> B | 3   |
| <input type="checkbox"/> C | 100 | <input type="checkbox"/> D | 125 |

38. Jika sebuah kelas diberi keyword final maka ...

- |                            |   |                            |  |
|----------------------------|---|----------------------------|--|
| <input type="checkbox"/> A | Kelas itu tidak dapat diturunkan (diwariskan) | <input type="checkbox"/> B | Kelas itu tidak dapat di-override                        |
| <input type="checkbox"/> C | Kelas dapat dienkapsulasi                     | <input type="checkbox"/> D | Semua salah karena kelas tidak bisa diberi keyword final |

39. Menyembunyikan implementasi internal dikenal dengan nama...

- |                            |           |                            |             |
|----------------------------|-----------|----------------------------|-------------|
| <input type="checkbox"/> A | abstraksi | <input type="checkbox"/> B | enkapsulasi |
| <input type="checkbox"/> C | pewarisan | <input type="checkbox"/> D | overriding  |

40. Class yang diwariskan dapat menggunakan atau mengakses atribut dan method yang ada pada class parent selayaknya class parent itu sendiri.

- |                            |      |                            |       |
|----------------------------|------|----------------------------|-------|
| <input type="checkbox"/> A | True | <input type="checkbox"/> B | False |
|----------------------------|------|----------------------------|-------|
